

Vlad Korobkov

Frontend developer

island2vlad@gmail.com

[Linkedin](#)

I have over 6 years of successful experience in developing scalable web applications using AngularJS and Angular 2+. I have created interfaces for users based on design system guidelines, worked with APIs, adjusted specifications from analysts, and created custom modules to extend application capabilities. My key skills include TypeScript, JavaScript, HTML5, CSS3, JSON, and RESTful APIs.

I also have experience in leading the development process and working in a team. I prefer a product-oriented approach to implementation in my work. I am only considering relocation to European countries or fully remote work.

Experience

Frontend developer

RTLabs

Dec 2015 to May 2023.

Feb 2017 - Frontend developer AngularJS

Apr 2021 - Frontend developer Angular2+

Managed front-end development and support of an internal B2G service on AngularJS for an audience of up to 2,000 users in various government departments and organizations for around 5 years. Responsible for organizing team work, interviewing candidates and reviewing code. In the last 1.5 years, developed the client-side for a similar service project using the latest versions of Angular. Implemented several modules in the project, covered by metrics, designed according to the UI guide and component library. Designed a query construction mechanism in response to user requests in a short period of time. I also work on improving library components as needed, and conduct timely refactoring to reduce codebase and legacy.

Achievements

- Single-handedly led a project from ideation to the first users for 4 years
- Initiated a complete rewrite of the project from AngularJS to the latest version of the framework
- During the project, about 50 releases were issued
- In addition, was involved in other company projects to support other teams
- Conducted the selection of the front-end development team for the project
- Onboarding

Responsibilities

- Developing and maintaining high-performance and scalable web applications using modern frameworks, libraries, and web development technologies
- Releases publication
- Code review

Mobile developer

AXbit

Windows Mobile developer

Feb 2015 – Dec 2015

Achievements

Implemented the overall application logic within the team, developed some of the modules, and created XAML markup.

Responsibilities

Windows Phone development.

Skills

- TypeScript
- JavaScript
- HTML5, CSS3
- Angular 2+
- Angular JS
- Code review experience
- Frontend team management experience
- Recruitment experience
- Git, bash, CI/CD
- Jira, Confluence, Figma
- English – B2

Education

2021 Luxoft, Luxoft Training Center "Technologies and Tools for Software Development and Information Systems", module "WEB-021 Angular 9"

2008 - 2015 Samara State Aerospace University, Specialist Degree, Automated information processing and management
